The Institution of Electrical Engineers

Physics Abstracts is published every two weeks by the Institution of Electrical Engineers in association with the American Institute of Physics. Twice-yearly subject and author indexes covering the period January–June and July–December are included in the subscription. Printed by Unwin Brothers Limited, Woking and London, England. Second class postage paid in New York, NY 10001, USA.

Six-monthly indexes

Cumulative indexes to Science Abstracts are published twice a year covering the period January-June and July-December. They comprise Author and Subject indexes and some specialised or 'small' indexes.

Author indexes

This lists in alphabetical order all authors of papers abstracted in the abstracts journal during the six months covered by the index together with the title of the paper. Where there are co-authors of a paper the title of the paper is given only under the name of the first author. The serial number of the paper in the abstracts journal is in the form 2-12345, ie 1972—abstract no. 12345.

'Small' indexes

These are specialised indexes which allow the user to find quickly particular types of information which might be difficult to find using the subject or author indexes.

Bibliography index

In this index reference is made to articles which contain a significant list of references or bibliography on the subjects listed.

Book index

This gives details of books received and abstracted by the abstracts journal.

Patent and Report indexes

These give details of those reports or patents which have been abstracted in the abstracts journal during the past six months.

Conference index

This index lists conferences for which published proceedings have been received and abstracted. Reference is given to the individual papers and their serial numbers in the abstracts journal.

Subject index

The subject index provides an alphabetical subject key to the articles included in the abstracts journal. Some general guidance on its use is given below:

1. Look in the index for the name of the specific subject in which you are interested. In most cases this name will be a heading in the index and you will find relevant articles listed under it.

2. Occasionally you will be directed from the subject heading chosen to a different heading under which the relevant or additional articles are listed.

3. If you do not find the subject heading you first choose, try a more general heading.

4. If you have difficulty at any stage in determining the appropriate heading, consult the Classified List of Headings on the yellow pages at the end of the index. This gives for each broad subject area the headings used in the subject index. Choose the most appropriate and look them up in the index.

5. Each entry under the heading relates to an article appearing in the abstracts journal and gives the serial number of that article in the journal preceded by the last digit of the current year, eg 2—12345: ie Abstract number 12345 in the abstracts journal for 1972.

Mechanical strength continued
plastics, durability, freq. depend. of fatigue limit, relax. phenomena effects 2—32630
plastics 2—15885

steel, failure in shock loading 2—39813
steel, fatigue strength, effect of heat treatment 2—36151
steel, fatigue strength, notch dependency under superimposed h.f. stress 2—32631
steel, forge-quenched, effect of tempering temp. 2—12898
steel, fracture strength of cementite particles 2—39839
steel, fracture toughness, effect of crack angle 2—3906
steel, fracture toughness, effect of fluidized bed heating 2—36216
steel, heat treatment, toughness rel. to serrated grain boundaries 2—19204
steel, heat-resistant, effect of alloying additions on creep rupture strength 2—9687
steel, high strength, tending to brittle rupture 2—39809
steel, high temperature conditions, obs. 2—29333
steel, high-Cr, fracture toughness, O content effects 2—36155
steel, high-Mn, resistance rel. to valve mat. development 2—3958
steel, low alloy, brittle fracture tendency, effect of alloying with molybdenum 2—1301
steel, low alloy, brittle fracture tendency at liq. n temp., tests using notch fracture technique 2—1300
steel, low alloy, brittle fracture tendency at low temperatures, effect of titanium additives 2—9680
steel, low alloy, relation to concentration and testing temperature 2—1305
steel, low C, annealed, through-thickness strength 2—39892
steel, low C, grain size depend. of fatigue strength 2—12855
steel, low C, strain hardening, effect of type of stress 2—36212
steel, low-cycle fatigue strength, thermal effect 2—39827
steel, maraging, strengthening with alloying elements 2—36218
steel, maraging strainless, fracture toughness 2—36243
steel, martensite, impact deformation strengthening 2—39901
steel, martensitic stainless, effect of thermomagnetic treatment 2—36280
steel, mild, biaxial strength criterion at low endurance 2—15867
steel, notched fatigue strength, application of finite element elastic-plastic stress analysis 2—15819
steel, quenched, aged, rel. to alloy additions, heat treatment conditions 2—19239
steel, relation to brittle fracture, effect of V and N impurities 2—6517
steel, stainless, rupture, He environmental effects 2—12871
steel, stainless, type 304, creep rupture specimens, metallography 2—39800
steel, static and dynamic loading, reproducible procedures 2—1303
steel, strengthening using hydroextrusion 2—9745
steel, structural, effect of preliminary heat treatment 2—36206
steel, tempering, fracture toughness, temp. depend. 2—3891
steel, wear-resistant, effect of C and V content 2—36237
steel, with Nb additive, effect of precipitates 2—9738
steel, XC 38, ductility, inclusions effects 2—15853
strains, diffr. meas., by surface impressed diffr. grating 2—36182
tubular specimen testing at high temp. under combined action of internal pressure and axial load 2—19225
turbine blade fastenings 2—5180
wear resist. testing machine 2—22312
wire, apparatus for fatigue tests 2—29353
Zircaloy tubing, rupture ductility, hydride platelets orientation effect 2—15842
Al-Fe-Ni:(Mg,Cr,Mn) alloy, nuclear reactor material, resistance to water corrosion, 220°-31°C, comp. depend. 2—13581
Al-Mg alloy, influence of alloying additions 2—12846
Al, electron microscope study of ductile rupture surface 2—39812

Al alloy, fracture toughness, effect of crack angle 2—3906
Al alloy 2024, thermomechanical treatment, yield strength, microstructure 2—32701
Al alloy 7075 T6, influence of thickness on fracture toughness parameter 2—15861
Al_2O_3, alumina, fracture at surface flaws, thermal expansion anisotropy effect 2—12886
Al_2O_3, films evaporated onto a steel substrate by electron bombardment heating 2—35886
Al_2O_3, sintered with vitrifying additives 2—36199
Al_2O_3, sodium borosilicate glass, dispersed composite system, fracture energy, strength 2—32624
Be-1%Fe, rupture, Mossbauer obs.32722 2—32722
C fibre, composites, flexure and shear strength, oxidation effects 2—36266
C fibre, neutron irradiation, fracture, Young's modulus, struct. 2—19193
C fibre, polyacrylonitrile-based 2—3852
C fibre, pyrolytic graphite coating effects 2—25610
Co-Fe-Ni/NbC(TaC) fibre reinforced eutectic systems, directional solidification, sogt magnet 2—3438
Co-Ni-Cr-Mo alloy, precip. hardening and phase transformation 2—19296
Cr-Ni-Ti, austenitic steel, intercryst. rupture rel. to creep resist. 2—9675
Cr-V steels, effect of Mo content and yield point on creep rupture strength 2—29286
Cr-Zr-Nb-C alloy, stress rupture and ductility control by microstruct. modification 2—9692
Cu-Al, effect of thermomechanical treatment 2—36202
Cu-Al alloy, effect of deform. and annealing temp. 2—12888
Cu-Al alloy, internally oxidized 2—39887
Cu-Be-Co alloy, fatigue strength, effect of heat treatment conditions 2—29299
59wt.%Cu-12wt.%Ni29wt.%Zn alloy, superposition of strengthening mech. by thermomech. treatment 2—32688
Cu-Ti alloy, decomposition and strengthening effects 2—39922
Cu, Al_2O_3 and ZrO_2 dispersion reinforced 2—1341
Cu, alloy, yield strength, age hardening, heat treatment, rel. to cold working 2—19241
Cu, electron microscope study of ductile rupture surface 2—39812
Cu, fatigue, freq. effect, high temp. 2—36147
Cu, polycrystalline sample, effect of Hg on breaking strength, under effect of u.s. vibration 2—6557
Cu, single crysts., fatigue life, fatigue hardening, work hardening, cyclic deform., fracture 2—6568
Cu and Kovar cold-welded joints, strength of small thickness sheets 2—6603
Cu solid solutions, low temp. intergranular brittleness 2—19203
Fe-Al-Cr alloy, creep rupture strength, effect of Ti and Mo 2—29430
Fe-Co alloy, phase transformation, struct., comp. depend. 2—19268
$Fe\text{-}Cr_7C_3$ eutectic, oriented crystallization, struct. 2—3436
Fe-Ni-Cr-Ti alloy, γ-hardened, strengthening mech., precip., γ_{apb} calcs. 2—32733
Fe-Ni martensite, rel. to transform. induced substructs. 2—22358
Fe-Si, effect of nonmetallic inclusions 2—36139
Fe, cast, electron microscope study of ductile rupture surface 2—39812
α-Fe, fatigue failure, intergranular fatigue cavitation at elevated temps. 2—25515
Fe, grain size dependence of plane strain fracture toughness, K_{Ic} 2—15864
Fe alloy, ageing effect 2—1353
Ge-As solid solution, pseudodislocational interactions, dispersion strengthening 2—39697
$Li_2O\text{-}SiO_2$ glass-ceramic, mech. props. rel. to crystallization 2—36140
Mg-Zn alloy, strength in various ageing states, mechanism of precipitation hardening 2—6599
MgO:Ni,Fe,Co, and fibre reinforced, strength, fracture toughness 2—39814
Mn-Cu-Fe, alloy, elinvar-type, nonmag., cold worked, heat treated, rigidity modulus meas. 2—29233
MnZn alloy, Hall-Petch relation and strengthening mechanism 2—6546
Nb-N alloy, yield stress, solution hardening 2—9661
Nb-O alloy, yield stress, solution hardening 2—9661
Ni-Al alloy, precipitation-hardened 2—29404
Ni-Cr elec. resist. heating alloys, rel. to lifecycle, added elements effects 2—32732
Ni, dispersion hardened, ThO_2 particles 2—9690
Ni, ZrO_2 dispersioning strengthening 2—39902
Ni alloy, alternating fatigue strength change by surface machining 2—29301
Ni alloy, Mar-M200, Hf doped, rupture life and ductility enhancement 2—15865
Ni alloys, development as high performance, high temp. mats., review 2—12973
Ni and alloys, dispersion hardened, role of microstruct. in strengthening 2—39936
Ni_3Ga, yield stress, anomalous temp. depend. 2—3870
PbTe, containing impurities, homogeneity study 2—36035
Pu-Ga alloy, plastic deformation, mech. props. rel. to temp. and homogeneity 2—15839
SiC, self-bonded, factors affecting fracture strength 2—29329
SiO_2 glass, strengthening by high pressure Ar impregnation 2—12892
Ti-Al-Cr and Ti-Al-Cr-Mo alloy, after annealing 2—36142
Ti-V and Ti-V-Al alloys, after quenching, comp. depend. 2—36141
Ti alloy, cold working and heat treatment, structural hardness, breaking stress 2—12949
α-Ti and alloys, effect of B-stabilizer 2—36143
V-Ti alloy, solid soln. strengthening and weakening 2—29441
W, dispersion strengthening, by chemical covapour deposition of W and HfN 2—22351
W alloy, for incandescent lamp filaments 2—39914
W composite, heat resist. alloy coated, creep rupture strength 2—12885
Zn, hydrostatic extrusion, struct. and plasticity 2—19184
Zr-(2.5 wt.%)Nb alloy, age-hardened 2—12952
Zr-Sn solid soln., substruct. strengthening 2—12953
α-Zr, substruct. strengthening 2—12953
Zr alloy, high-strength, for reactor press. tube appl. 2—39945

  geometric factor, circular or rectangular geometric types 2—21314
  high energy photoprotons, on-line counter hodoscope 2—34830
  msgnetic spectrograph for meas. of cosmic ray spectra at different altitudes in the atmosphere 2—27802
  multiwire proportional chambers, gas mixture for high gain 2—34786
  for neutral particles H, He, N atoms, by detection of secondary electron emission from Cu or AgMg surfaces 2—27885
  neutron, B lined chamber working under current collection and no multiplication conditions, for whole dynamic range of reactor 2—31375
  neutron, high intensity, with high neutron to gamma ray sensitivity ratio 2—18017
  neutron, nuclear reactor safety instruments, using multiplication 2—38763
  neutron, polycarbonate detector sandwiched between U fission foils, track obs. 2—38390
  neutron, using resonant scattering from ^{7}Li 2—38382
  neutron counter, high efficiency design for cosmic ray applic. 2—23930
  neutron detection using resonant scattering from ^{7}Li to identify levels following neutron producing reactions 2—27890
  neutron detector for location of beams in space, patent 2—21327
  neutron flux monitor, thin glass scintillation system, ^{6}Li(n, α)T 2—5588
  neutron sensor, self powered for flux obs. in high temp. nuclear reactor 2—11914
  neutrons, array of plastic scintillators, 1.0 to 450 MeV 2—34797
  neutrons, PENA flux measuring system with fast-response 2—5595
  neutrons, shelled activation detectors, measurement at kV energies 2—5580
  nomograms for calc. of error of energy of binary type nuclear reaction product and cross-section as function of emergence angle 2—27831
  optical with Van de Graaff accelerator as pulse radiolysis apparatus 2—441
  photon detectors, review article 2—38350
  phototube 8 channel amplifier modules for multidetector systems 2—31378
  pickups for beam position sensing of accelerated electrons 2—31400
  plastic foils, location of tracks aided by photodeposition of coordinate grids 2—27907
  polarity-correlation system for fast-reactor noise studies 2—11916
  pulse reactor radiation detection system using on-line computer 2—15173
  radioisotope distributions in human body true multiple scanning and obs. of absolute local activity 2—11206
  secondary particle identification from ionization losses in 81 cm H_2 bubble chamber 2—34832
  semiconductor detector with anticoincidence system for suppression of backscattered β-rays 2—14759
  solid state, det. of electron detection efficiencies 2—14770
  source strength intercomparisons, simple two-detector method 2—24094
  STEK, fast-thermal neutron measuring device, time of flight technique, 0.1 and 50 KeV 2—18005
  streamer chamber charging regulator system 2—34837
  time-of-flight system for heavy particle identification in nuclear reactions 2—442

Particle detectors continued
triple coincidence technique for inverse beta decay reactions 2—8237
ultrarelativistic, detection by transition radiation in X-ray frequency range 2—18020
n, threshold detectors of fast spectra, evaluation 2—38351
^{10}B, for γ-rays, det. of efficiency using Monte Carlo method 2—27892
CdTe:Cu (Ga)(In), detector-mat. evaluation by e.p.r. and channelling expts. 2—36539
CdTe, growth by travelling heater method 2—35944
CdTe, γ-ray detector material, conf., Strasbourg, France, June (1971) 2—34808
CdTe, nucl. rad. detector, ion implanted, performance 2—34815
Ci, used in heavy ion time-of-flight mass spectrometer 2—14745
